# The Battle of Neighbourhoods: Find the best place to stay in New York City

Applied Data Science Capstone Project

Created by: Suhas Uttam Holgunde

## **Introduction: Business Problem**

### **Background**

According the latest NYC&Company release New York City welcomed about 65.2 million tourists in 2018 year - 51.6 million domestic and 13.5 million international visitors. And these numbers are continuously increasing from year to year.

New York City has the largest selection of lodging choices in the country – from the hostels to the luxury hotels. The prices vary from 100\$ till several thousand dollars with average price 292 USD per night.

### **Problem Description and Project Goal**

In New York City there are almost 300 hotels with over 75,000 hotel rooms and Airbnb has more than 50,000 apartment listings in New York City in 2018 year - it can be hard to find the right fit or know how much you will get with your money.

In this project we will try to find the most optimal neighborhoods on Manhattan where a tourist can rent an accommodation via Airbnb service and have a pleasant stay in NYC and a possibility to attend the most visited attractions like Central Park, Times Square and so on.

### **Data**

### **Target Audience**

This investigation would interest New York City's visitors who prefers short stays (from 1 night) and wants to select the best neighborhoods on Manhattan, New York.

### **Initial datasets**

In our investigation we will use the free and public available datasets.

We will try to evaluate available Airbnb 2019-year accommodations on Manhattan, New York and define the most reasonable apartments sets (clusters) for the visitors.

Based on definition of our problem, we suppose that factors that will help us are:

- accommodation's average price per person by the neighborhood;
   number of tourist attractions near the accommodation;
- number of crimes nearby the accommodation

Following data sources are needed for our project.

- New York City apartment listing from the Inside Airbnb site;
- New York Neighborhoods Tabulation Areas official NYC neighborhoods names and coordinates;
- Foursquare API to extract data about venues food places, museums, galleries, shopping centers, and so on;
- New York Crime data records for 2019 year.

### **Data**

### Data Cleaning

#### **Airbnb New York City apartment listing**

For our project records were filtered as

- Borough Manhattan, New York only;
- Number of reviews >= 10;
- Availability >= 10 days/year;
- Last Scraped/Reviewed later than 2019-10-01;
- Minimum nights >= 1;
- Excluded Hostels and Camper/RV;
- Excluded Shared rooms.

After filter was applied, we have 2,356 accommodations in our dataset.

#### **New York Police Crime Records**

We filter this dataset by

- Borough *Manhattan, New York* only;
- Crime type FELONY and MISDEMEANOR.

After filtering we have 101,086 crimes records for Manhattan in 2019 year.

### Feature Engineering

#### Airbnb

We add some new features (columns) to our Airbnb dataset

- **full\_price** *price* + *cleaning\_fee*. Airbnb *price* column could be misleading because it does not include mandatory cleaning fee price; **price\_per\_person** (price + cleaning\_fee)/accommodates;
- **tab\_area** from *New York Area Tabulation Name* dataset to our *Airbnb* data set because Neighborhoods' names are quite different in these data sets. We use custom *define\_tab\_area* function which returns *New York Area Tabulation Name* for each Airbnb accommodation's latitude/longitude pair;
- crimes calculate the number of crimes in radius of 100 meters from each accommodation.

### **Data**

#### **New York Police Crime Records**

We added **tab\_area** column (New York Area Tabulation Name) to NYC Manhattan Crimes data set because we need to display **Crime Rate** Information on the New York Area Tabulation Map.

# Methodology

In this project we are trying to detect Manhattan's Neighborhoods that have accommodations for rent with positive reviews, reasonable prices, low number of crimes and tourists' attractions nearby.

In the first step we have collected the following data:

- Airbnb Accommodations with their NYC Tabulation Area (official neighborhood names);
- Airbnb Accommodation's number of crimes nearby
- Defined NYC Tabulation Area (official neighborhood name) for each Manhattan's crime case.

**The second step** in our analysis will be a calculation and exploration different neighborhoods of Manhattan. We will explore the following characteristics:

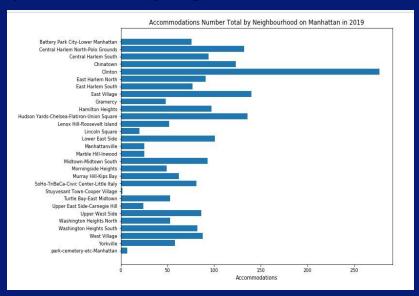

- number of crimes in the area;
- average price per person

number of accommodations available.

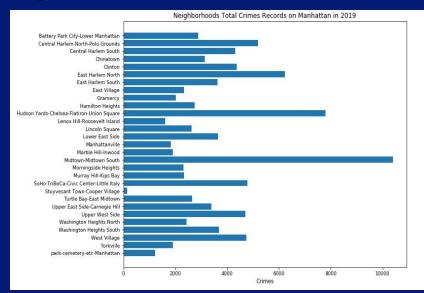

#### In the third and final step we will

- select Top-100 Airbnb accommodations based on summary rating, number of crimes and price per person, and
- invoke Foursquare API to find Top accommodations' nearby venues
- create and investigate clusters (using k-means clustering) for our accommodations to make some recommendations to our tourists.

### **Apartments Total by Neighborhood Chart**

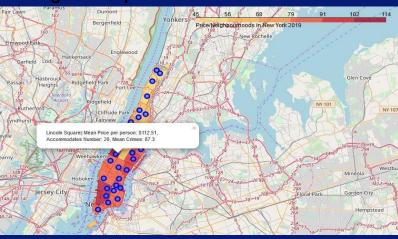

### **Neighborhoods Crimes Records Chart**

### **NYC Tabulation Area Neighborhoods**

**Average Prices per Person** 

# Accommodations Detailed Info Map

- Lincoln Square 112.51 USD 20 accommodations
- Stuyvesant Town-Cooper Village 107.5 USD 2 accommodations

- Top-5 Neighborhoods with **Highest average Price per Person** in 2019 year:
  - West Village 112.85 USD 88 accommodations

- SoHo-TriBeCa-Civic Center-Little Italy 105.38 USD 81
   accommodations
- Upper East Side-Carnegie Hill 96.98 USD 2.
   accommodations

Top-5 Neighborhoods with **Lowest average Price per Person** in 2019 years

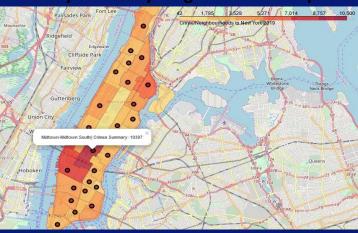

Marble Hill-Inwood - 45.48 USD - 25 acc

- Washington Heights South 46.79 USD 82 acc.
- Washington Heights North 54.74 USD 53 acc.
- Central Harlem North-Polo Grounds 57 USD 132 acc.
- Manhattanville 59.75 USD 25 acc.

### **Crimes Cluster Map**

### **Summary Crimes by Neighborhoods Map**

Γop-5 Neighborhoods with the Highest Crime level in 2019 year:

Midtown-Midtown South - 10,397

Stuyvesant Town-Cooper Village	- 145
park-cemetery-etc-Manhattan -	- 1,213
Lenox Hill-Roosevelt Island	- 1.604

- Hudson Yards-Chelsea-Flatiron-Union Square -7,788
- East Harlem North 6,221
- Central Harlem North-Polo Grounds 5,186 SoHo-TriBeCa-Civic Center-Little Italy - 4,789

<ul> <li>Manhattanville</li> </ul>	- 1,832
Yorkville	- 1.898

Top-5 Neighborhoods with the **Lowest Crime level** in 2019 vear:

### **Foursquare API Neighborhoods Analysis**

Because of the Foursquare API limitations for free usage lets analyze Top-100 Accommodations from the Airbnb data

We define Top-3 Venue Categories for each accommodation in radius of 1000 meters.

Then we will try to define the 3 clusters for these accommodations

Select Top-100 Airbnb accommodations by

- review scores rating overall accommodations rating from maximum 100 to lower values;
- full\_price from lower price to higher;
- price\_per\_person from lower price to higher;
- crimes from lower number to higher;

We define our custom Top-Level categories for Venues

### **Foursquare API Neighborhoods Analysis**

Calculate the Top-3 Venues Categories for each accommodation.

#### Then run k-means to cluster the neighborhood into 3 clusters

Cluster Labels	name	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	1st Most Common Venue Share	2nd Most Common Venue Share	3rd Most Common Venue Share
1	**Stylish, Quiet, Centrally Located (9th & 52nd)	Food Place	Entertainment	Fine Art	0.62	0.35	0.04
2	157-C	Food Place	Sightseeing	Fine Art	0.52	0.29	0.14
2 /	A neat bedroom in a cozy 3-bedroom apartment	Food Place	Sightseeing	Shopping	0.48	0.41	0.04
0	Art filled peaceful paradise EV Union Square	Food Place	Sightseeing	Shopping	0.71	0.07	0.07
0	Artsy Parisian Apt in Greenwich Village	Food Place	Entertainment	Sightseeing	0.65	0.26	0.09

Now, we can examine each cluster and determine our custom venue categories that distinguish each cluster

### **Foursquare API Neighborhoods Analysis**

#### Cluster 0 – Mix (red dots) characteristics:

- average price\_per\_person;
- average crimes rate
- second top Common Venue Category has a Mix of all kind of Categories
- contains 58% from all top accommodations.

#### Cluster 1 – Entertainment (blue dots) characteristics:

- highest average price\_per\_person among all clusters;
- highest average crimes rate among all clusters
- Entertainment is 1st and the 2nd Top Common Venue Categories;
- contains 15% from all top accommodations.

#### Cluster 2 – Sightseeing (light-green dots) characteristics:

- lowest average price\_per\_person,
- lowest crimes rate among all clusters
- Sightseeing is the second top Common Venue Category;
   contains 27% from all top accommodations.

## **Results and Discussion**

During the analysis, three clusters were defined.

All clusters have a 'Food Place' category as the First Common Venues. This is what we have in common among our clusters.

But they are distinguished by the other characteristics as

- average Price per person;
- average Crimes Rate;
- the second Common Venues;
- number of available Airbnb accommodations;
- neighborhoods location

#### Cluster 0 – Mix is the most generic cluster - it has a

- average price per person \$110;
- average crimes rate 67 (but very varying depends on the neighborhood, from 3 to 385 crime cases in radius of 100 meters from the accommodation);
- mix of all Venue Categories (Fine Arts, Shopping, Entertainment)
- contains 58% from all accommodations selected from analysis (Top-100 Airbnb accommodations);
- spreads almost on all Manhattan's areas.

# **Results and Discussion**

Cluster 1 - Entertainment is the smallest cluster with the following qualities (Nightclub, Stadium, Pub, Theater, Concert and so on):

- highest average price\_per\_person among all clusters \$111;
- highest average crimes rate among all clusters 102;
- Entertainment is 1st and the 2nd Top Common Venue Categories
- contains 15% from all top accommodations (Top-100 Airbnb accommodations);
- spreads on Chelsea, Hell's Kitchen, and Midtown Airbnb's Neighborhoods.

**Cluster 2 - Sightseeing** is the cheapest one with many Sightseeing attractions nearby (Monument/Landmark, Memorial Site, Historic Site, Lake, Park, Pier, and so on)

- lowest average price per person \$59
- lowest crimes rate among all clusters 65;
- Sightseeing is the second top Common Venue Category
- contains 27% from all top accommodations (Top-100 Airbnb accommodations)
- spreads on East Harlem, Financial District, Harlem, Inwood, Morningside Heights, Roosevelt Island, Upper West Side, Washington Heights, West Village.

We identified three clusters from which a visitor could choose an appropriate accommodation based on his/her preferences or needs.

#### Limitations

- We limited our investigation by Manhattan Borough only;
- Foursquare free account has a limitation of 950 calls/day so maybe it's worth to upgrade our free account to analyze Top-1000 Airbnb accommodations instead of Top-100.

### Conclusion

During the analysis, we cleansed and investigated Manhattan Neighborhoods' datasets, found some statistical characteristics and visualize

The aim of this project is to help Manhattan visitors select the Airbnb neighborhoods where to stay based on the most common venues, price policy, and safety characteristics:

- if a person is interested in **entertainment** (Nightlife, Pubs, Concerts, Movies) we recommend paying attention for accommodations from the *Cluster 1 Entertainment*: *Chelsea, Hell's Kitchen, and Midtown* Airbnb's Neighborhoods. But the person should take into the consideration the high prices and crime rate for this location;
- if a person is looking for a neighborhood with **lower prices** and nice views nearby, we recommend looking at *Cluster 2 Sightseeing*: Chelsea, Hell's Kitchen, and Midtown Airbnb's Neighborhoods;
- if a person does not have any preferences investigate proposals from *Cluster 0 Mix*. It has average prices and spreads over almost all Manhattan's neighborhood.

#### **Areas of improvement**

- We could include the other NYC Boroughs The Bronx, Brooklyn, Queens, and Staten Island;
- We also could utilize other services like Google API to find nearby Venues
- We have not analyzed the Hotels. It's very big chunk but we have not found any fresh public data sets about hotels accommodations
  with rating.
